

COVID-19 Coronavirus Self-Screening

If you have a smart phone/device with access to the internet, you have the option of completing your COVID-19 screening questions online using our electronic self-screening tool.

When you arrive and before entering the building, answer the online questions. If you receive a message to proceed, enter the building and show your completed screening message to a member of our screening team.

If you prefer, screening can be done verbally at our screening desk.

Self-Screening is for me. How do I access the online tool?

You can access our online screening by using one of the QR Codes below.

A QR Code is an image that a smart phone or tablet recognizes as a website link.

Using a smart phone with data or WiFi, open the camera application and hold the phone so the QR code is completely visible on your screen. After a moment or two, a notification will appear identifying the QR code as a website link. By tapping the notification, your internet browser will open and connect you to our secure self-screening webpage.

Please scan the QR Code for the screening tool that best applies to you:

**I am here for an
Essential Visit**

**I am a client or companion
here for an outpatient
appointment.**
